## The need for Cool Roofs

Roofs represent 20-25% of Urban Surfaces

### Roofs are Solar Radiators

"Cool Roofs... can offset 24 billion tonnes of CO<sub>2</sub> - the equivalent of taking half the cars in the world off the road"

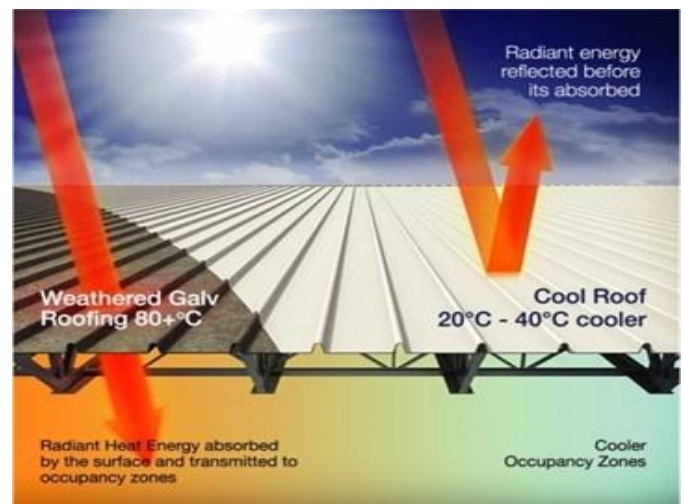

"The offset provided by cooling urban surfaces affords us a significant delay in climate change"

### It makes sense...

... to design a barrier that combats the specific Heat Source - and that means reflecting the suns rays BEFORE they're absorbed, converted and magnified as heat.

Lawrence Berkeley National University  
- White Roofs Cool the World.
